

Ice sampling instructions

Sample collection:

- Exercise care when collecting the sample to ensure that the sample will be representative of the ice being tested and to avoid contamination of the sample.
- Fill bottle to the neck over the 100mL mark. Replace cap and label.

Sending to laboratory:

- All samples should be held at 4°C after sampling, and prior to shipping to the laboratory.
- Water samples should reach the laboratory within 6 hours of collection. Within 24 hours is acceptable as long as the samples are kept chilled at all times.

Please refer to our current price book for sample types, test turn-around times and pricing. If you have any questions or would like any further information, please contact your local Awanui Scientific laboratory or Territory Manager.
