

Microbiology testing

All of the following tests can be done from a single product sample (minimum weight 25g):

- Total aerobic counts
- Coagulase-positive staphylococci
- Total faecal coliforms / E. coli
- Bacillus cereus
- Clostridium perfringens
- Yeast and mould counts
- Enterococci
- Enterobacteriaceae

For each of the following tests an additional amount of product is required, as they each have a different incubation broth:

- Salmonella sp. 25g
- Listeria sp. 25g
- Campylobacter sp. 25g

For example, if total aerobic counts and Salmonella were requested, the minimum weight of product required would be 50g. If total aerobic counts and E. coli were requested, the minimum weight of product required would be 25g.

Please refer to our current price book for sample types, test turn-around times and pricing. If you have any questions or would like any further information, please contact your local Awanui Scientific laboratory or Territory Manager.
